

“When you do the best, God will do the rest” – this quote is the lamp that guided me, and always will throughout my academic career. I still remember how uncomfortable it felt when I missed lessons and tuitions due to illness. I never wanted to let classes go unattended. I never wanted to burn the midnight oil when the exams are around the corner. I am always motivated, responsible, enthusiastic, organized and focused on achieving my goals. Since young, I’ve dreamed to become a learned man and serve my country in the future. All these thoughts and vision had envisioned me to excel in my studies and extra-curricular.

I need this scholarship to pursue my studies in mechanical engineering and become a successful technopreneur.

That’s because mechanical engineering careers center on creating technologies to meet human needs. Virtually every product or service in modern life has probably been touched in some way by a mechanical engineer to help humankind including creating future solutions in health care, energy, transportation, world hunger, space exploration, climate change, and more. Mechanical engineers will help find the answers to these big questions and more and not just through technical expertise. The best answers will arrive in a spark of inspiration.

The activities that I was involved in before helped me to become a better student. Undoubtedly, the most influential people in my life have been my parents. All my accomplishments and successes are due to their guidance and support. My mother is not working and my father is the soul bread of my family. However my father is having some financial problems. That is the reason why I applied for this scholarship.
